<https://jamesrhoe.com/>

A versatile software developer with over 3 years of experience, specializing in both frontend and fullstack development. Proficient in a broad range of technologies including React, NextJS, and TypeScript. Bringing a problem-solving mindset to creating scalable, intuitive, and efficient applications.

Professional Experience

The Praxeum

San Jose | 2021 - Present

Frontend Engineer

- Rebuilt outdated website to improve user experience, SEO, navigation, and performance, which increased scheduled tryouts by 50%.
- Implemented creative solutions to fulfill feature requests such as user sign-ups, appointment scheduling, and blog capabilities, enhancing user engagement.
- Included responsiveness, multi-platform, and hosting support providing a seamless user experience on any device or screen size.
- Collaborated closely with managers and the marketing team to ensure the website design aligned with brand guidelines and business objectives.
- Provided comprehensive documentation and training for the in-house team to facilitate ongoing maintenance and updates.

Guardian Saga Support

Remote | 2022 - 2024

Frontend Developer

- Transformed a completely static HTML, CSS application into an interactive user interface using animations, transitions, and carousels with Next.js, improving user interaction and satisfaction.
- Dynamically queried and rendered blog articles based on categories, tags, and publication dates using GraphQL and Axios.
- Developed reusable components and modular code to improve maintainability and scalability, setting a standard for future development.
- Hosted application on Vercel to provide a 99.9% uptime guarantee

Frontend Simplified

Remote | August 2022 - November 2024

Frontend Developer

- Modernized HTML, CSS, and React site into a responsive, dynamic, and interactive application prioritizing user experience and device compatibility.
- Optimized site performance by implementing coding best practices, concurrent API requests, and lazy-loaded components and images.
- Processed API requests with Axios to access data from a cloud server and dynamically represent it through skeleton loading states, pagination and dynamic routing.
- Leveraged Git for version control, utilizing pull requests and merges to maintain code compatibility, and to ensure a successful collaborative process.

Projects (personal)

Video Meeting Application:

Created a video meeting platform

- Engineered & integrated a video call platform with a fully responsive design, user accounts, and scheduling to virtually connect users from anywhere in the world.

Search API Project:

Created a search platform for movies

- Engineered & integrated a search api for (movies/anime/etc) with a fully responsive design, loading states & dynamic routing to showcase end users movies on a mass level search and showcase (movies/anime/etc) on an individual route.
